

Our products are indispensable for people, animals, and plants.

Agriculture customer segment

- Every plant needs the three macronutrients
 nitrogen, phosphorus, and potassium (N, P, K), for
 which there is no substitute.
- Global megatrends call for efficient fertilization.
- With our fertilizers, we support farmers in combating world hunger.
- Alongside traditional potassium chloride (MOP), we provide farmers with a **broad portfolio of specialty products** for various nutrient requirements, which are also **approved for organic farming**.

Our products are indispensable for people, animals, and plants.

Industry+ customer segment

- K+S offers a wide range of high-purity salts (sodium chloride and potassium chloride) for over 5,000 different applications.
- With our highly diversified customer structure and products, our results are only slightly affected by industry-specific crises.
- Our salts are also used in pharmaceutical products and the food industry, making them an important part of everyday life.

Agriculture has evolved and so have we – since 1889.

Advantages in logistics due to unique selling points: K+S is the only potash supplier with production sites in Europe and North America and has a first-class logistics network.

Continuous expansion of our advisory services to provide local farmers with added value and support them in efficient fertilization. In Africa and Asia in particular, we see the greatest potential.

High access barriers in the potash market will also prevent a significant oversupply in the future.

Available Resources

Technical Feasibility

Legal Framework

Energy Supply

Water Supply

Transportation Routes

These factors make new projects both time-consuming and capital-intensive.

Demand for potash is growing at a CAGR of 2 - 3%, making new projects or expanded capacities averaging around 2 million tonnes per year urgently necessary to meet rising demand.

Source: IFA

Global megatrends require efficient fertilization and irrigation.

> 700 million people

+0.2 °C global warming

per decade on

average

suffer from water shortage

had to suffer from hunger in 2022.

were moderately or severely affected by **food insecurity** in 2022 (approx. 2.4 billion people)

40% of the population

9.7 billion people

will live in the world in 2050 (2022: 8.0 billion people)

Balanced fertilization with the necessary macronutrients contributes to the required yield increase in agriculture.

Potassium-based fertilizers make plants more resistant to weather extremes such as drought and increase their water use efficiency.

We offer farmers a broad specialty portfolio for various nutrient requirements in addition to MOP.

Our products are approved for organic farming.

Our strategy focuses on optimizing the existing business.

Our strategy focuses on optimizing the existing business.

Continuous growth potential: With our new potash plant in Bethune, Canada, we can grow steadily and increase our production by >100,000 tonnes per year. As a result of the solution mining process, the plant will position itself within the most cost-effective 20% of potash producers with a final production rate of 4 million tonnes per year.

At the same time, we are optimizing our German sites to ensure our position also at the lower end of the cycle and further improve our environmental footprint as part of our sustainable transformation, e.g. through our Werra 2060 project.

Expanding our specialties portfolio: We recognize global trends and are expanding our range of specialty products.

Leveraging our unique infrastructure: It offers many opportunities such as the storage of gas in caverns, underground farming, tailings pile covering, waste and recycling management.

Our sustainable transformation pays off and makes K+S an attractive investment

Werra 2060

- Efficiency increase, more specialties
- Securing the future
- Less tailings disposal
- Reduction of saline process water and. therefore, the end of the discharge in 2028
 - Halving CO₂

New Business Areas/Use of infrastructure

- Coverage of tailings piles /REKS
- Circular economy
- Underground/Indoor Farming
- Cavern/hydrogen storage

K+S is the first producer to offer potash and salt with the smallest possible CO₂ footprint!

Decarbonization

- 25% CO₂ reduction by 2030
 - 60% by 2040
- Greenhouse gas neutral (Scope 1 and 2) by 2045

Ramp-up Bethune/CA

Increase in production from a good 2 to 4 million tons p.a. through cost-effective. water- and energysaving secondary mining

- Our capital expenditure will be increased in the course of the sustainable and economic transformation (especially in the years 2024 to 2026).
- Nevertheless, our strong balance sheet and improved operating cash conversion ensure at least break-even free cashflows – even at the lower end of the cycle.
- Adjusted free cash flow and, therefore, the distribution potential will improve significantly after the period of increased capital expenditure even with low potash prices, potash price increase would result in additional improvement.

We are global pioneers in environmentally friendly and sustainable mining.

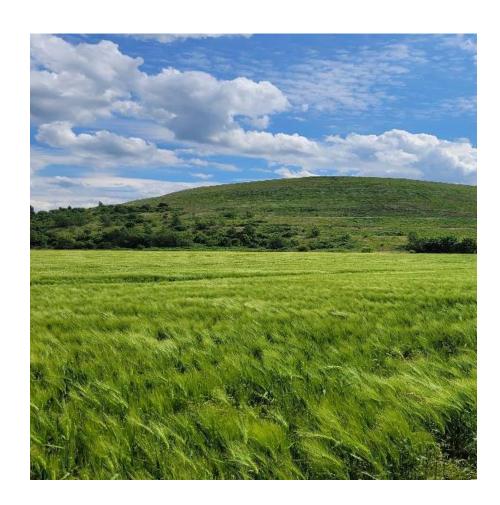

We have already reduced our CO₂ emissions by around 80% since 1990.

At the same time, we continue to set ourselves ambitious goals and have developed a transformation path to becoming greenhouse gas neutral (Scope 1 and 2) by 2045.

We also comply with strict environmental regulations, particularly in production water, and are working on producing **potash and salt with the smallest possible** CO₂ **footprint**.

With our products, we are making a direct contribution to the Sustainable Development Goals (SDGs).

K+S website: Contribution to the SDGs

Our financial ambitions are aligned with the cyclical nature of our business.

We want to **earn our cost of capital** on average over a 5-year cycle (ROCE > WACC).

We are also aiming for an average **EBITDA margin of more than 20%** over this cycle.

K+S wants to maintain a **strong balance sheet** and generally strives
for a **maximum leverage ratio**(net debt/EBITDA) of 1.5x.

Distribution Strategy

K+S aims to return 30 – 50% of the adjusted free cash flow (operative) to the shareholders.

The distribution takes the form of a **dividend**, which **can be combined with a share buyback** in very good years to counteract strong fluctuations in the annual dividend.

The following factors are applied in determining the exact percentage:

- Expected business development
- Expected development of capital expenditure
- Balance sheet structure

We have emerged stronger from the challenges of recent years and are well positioned for the future.
