K+S

1 | 9 K+S Group

Board of Executive Directors – since June 1, 2025

Dr. Carin-Martina Tröltzsch

**Dr. Christian H. Meyer
(Chairman)**

Christina Daske

Dr. Jens Christian Keuthen

You can find the CVs of our Executive Board members on the K+S website. For current information on the responsibilities of the individual members of the Board of Executive Directors, please refer to our bylaws which can also be found on the K+S website at www.kpluss.com/executivedirectors.

K+S Conspect: 50 locations on 6 continents

The history of the **K+S Group** goes back to the **19th century**, when the **world's first potash deposits** were opened up in Germany. Today, the K+S Group is an internationally oriented raw materials company with **production sites in Europe and North America**.

K+S strives for **sustainability** and acknowledges its responsibility towards people, the environment, communities, and the economy in the regions in which it operates.

We extract raw materials **responsibly** – today and for **future generations**.

Employees worldwide
ca. 11,000

K+S Group financials (2025)

Revenues
€3,647.9 million

Adjusted free cash flow
€29.1 million

EBITDA
€612.8 million

EBITDA margin
16.8%

Why is K+S an attractive investment for investors?

K+S – an attractive investment

- Distinctive specialty-driven product portfolio tailored to the agricultural sector
- Strategic potash deposits in Germany and Canada ensure privileged access to key global application regions, complemented by a strong European business with highly efficient logistics
- Compelling long-term growth trajectory in Canada with attractive returns
- Underlying megatrends remain robust; incremental global demand can only be met through substantial, capital-intensive capacity additions
- Industry+ customer segment provides resilience, benefiting from structurally improved margins in the European salt market and low capital intensity
- Unique infrastructure creates excellent optionality for developing future business opportunities

Key investment highlights

1

Our products support people, animals, or plants

Global megatrends call for efficient nutrient use. With our fertilizers, we can support farmers in achieving stable yields. K+S offers high-purity salts for over 5,000 different applications, including in pharmaceutical products and the food industry, making them an important part of everyday life.

2

High access barriers in the potash market will also prevent a significant oversupply in the future

K+S expects demand for potash to grow at a compound annual growth rate of 2-3%¹, making new projects or expanded capacities averaging around 2 million tonnes per year¹ urgently necessary to meet the rising demand. With our new potash plant in Bethune, Canada, we can grow steadily and increase our production by >100,000 tonnes a year.

3

Agriculture has evolved and so have we – since 1889

Unique selling point: K+S is the only potash supplier with production sites in Europe and North America and has a well-developed logistics network. Continuous expansion of our advisory services to provide local farmers with added value and support them in efficient fertilization.

4

Our strategy focuses on optimizing the existing business

We are optimizing our German sites to ensure our position also at the lower end of the cycle and improve our environmental footprint. We use opportunities to expand our specialties portfolio and leveraging our unique infrastructure (storage of gas in caverns, underground farming, tailings pile covering, waste and recycling management).

5

We extract raw materials responsibly – today and for future generations

Through the extensive use of highly efficient CHP technology, the fuel switch from coal to natural gas, and the implementation of energy efficiency measures, we have already significantly reduced our GHG emissions (Scope 1 and Scope 2) of our active German sites since 1990.

6

Strong balance sheet and prudent financial policy

K+S wants to maintain a strong balance sheet and generally strives for a maximum leverage ratio (net debt/EBITDA) of 1.5x. Clear guiding principles for shareholder distributions established.

¹ IFA 2024, K+S estimates; actual production including potassium sulfate and low-grade potash

K+S at a glance

Customer segments (no segments according to IFRS)

Agriculture

With our wide range of potassium chloride (MOP) and fertilizer specialties, as well as accompanying advice, we support farmers around the world in achieving high yields and the best crop qualities.

Revenues H1/2026
€1,378.4 million

Sales volumes H1/2026
3.98 million tonnes

Industry+

We produce, refine, and supply natural raw materials for communities, consumers, and numerous industrial applications – and if residues remain, we have the right disposal solution. Our products and services keep production running.

Revenues H1/2026
€660.7 million

Sales volumes H1/2026
4.09 million tonnes

2 | 9 Relevant megatrends

Important megatrends and their implications

Implications for K+S

- **Arable** land shrinking
- **Yield** needs to be **improved**
- Higher efficiency of **fertilization** and **irrigation** needed
- Plants have to be more **stress resistant**
- **Infrastructure** needs to be improved
→ focus on **renewable energy**
- **Growing population**, especially in **Asia**, needs **more salt** for various purposes

Sources: United Nations, 2017; World Population Clock of the Deutsche Stiftung Weltbevölkerung (dated July 2022); "Global temperature change" from James Hansen et al. (September 25, 2006); World Water Report 2021 of the UNESCO; James Davies, Rodrigo Lluberas and Anthony Shorrocks, Credit Suisse Global Wealth Databook 2015

Why use fertilizers?

“The Natural Laws of Farming“, Justus von Liebig, 1863

“The growth and yield of a plant is limited by the nutrient available in the smallest amount.”

- Plants need sunlight, water, and **minerals** to thrive.
- There are few soils on earth which have a sufficient content and availability of **plant nutrients** to achieve **high yields** over a longer period without fertilization.
- Potash is an **indispensable** addition to the natural nutrient content of arable soils.
- The deprivation of nutrients by harvesting and other factors must be compensated by **balanced fertilization**.

Long-term key drivers for our fertilizer business

Less arable land – but more protein consumption per capita

In 2050, only roughly 25% of a soccer field will be available for a person's annual food supply – 80% of the future growth in agricultural commodity production will result from increases in yields. This is achieved through the use of balanced fertilization.

Source: UN, World Population Prospects, 2022 Revision, UNDP, 2013; FAOStat 2014; ¹ FAO 2014 - Forecasts based on expected increase in animal protein

Long-term demand drivers

Farmer profitability of corn (USA)

Expenditure for potash products of an agricultural farm: approx. 4% of the total cost

The earnings prospects should give the agricultural industry sufficient incentive to increase the yield per hectare by using plant nutrients.

Profit potential in % of revenues

3 | 9 Market situation

World potash production and sales volumes by region

in million tonnes

Rounded values were used to simplify presentation.

- Before the restrictions on Russian exports and the sanctions against Belarus, the potash market was operating at full capacity.
- By 2021, Russia and Belarus each produced around 16% of global potash volumes. Capacity expansions (11 million tons) would have come from these countries in the coming years.
- 28% of global wheat exports come from Russia and Ukraine.

Sources: IFA, K+S, Estimates
Basis: Year 2025 – incl. Potassium sulfate and low-grade potash

	2021	2022	2023	2024	2025
World potash production	77.9 mt	66.3 mt	74.0 mt	81.0 mt	80.8 mt
World potash sales volume	77.0 mt	63.7 mt	72.6 mt	79.2 mt	80.6 mt

New potash capacities needed to meet rising demand

Mio. t (incl. Potassium sulfate and low-grade potash)

Global cropland nutrient balance

Potassium the missing link

- Global nitrogen balance in the soil has increased continuously, while potassium balance has declined since the 1990s despite the growth in application.
- The growing imbalance threatens soil health, crop resilience and long-term yield stability.
- Addressing this imbalance is essential for sustainable global food security.

Source: FAO. 2024. FAOSTAT: Cropland nutrient balance.

Growth drivers for global MOP demand

Global demand hotspots (regions marked in green)

Regional demand drivers

Brazil: Larger corn and soybean acreage

Southeast Asia & India:
Growing palm oil production

China: More ambitious yield targets and stricter production requirements

Africa: High growth potential, as Africa continues to be undersupplied with MOP

	2026 vs. 2025	2027 vs. 2026	2028 vs. 2027	2029 vs. 2028

Supplier structure on European salt market

K+S has a market share of 18%

Source: K+S

- **K+S** has the highest market share in Europe and is the leader in salt production.
- A versatile product portfolio with a high proportion of specialties enables customized solutions for a wide range of market requirements and every industry.
- Thanks to several production sites in Europe and an extensive distribution network, **K+S** guarantees a comprehensive geographical presence that enables fast, flexible and reliable deliveries.

4 | 9 Sustainable transformation as part of our strategy

Guiding principles of strategy and management focus

Financial ambitions

- Earn cost of capital over a 5-year cycle
- At the same time, an average EBITDA margin of > 20% is aimed for over this cycle
- Generally striven for a leverage ratio (net debt/EBITDA): maximum 1.5x

K+S Sustainability Goals

We have set ourselves ambitious goals in these three areas of action:

Social Responsibility, Environment & Resources and Governance

- The human being is our focus
- Active commitment to environmentally friendly production
- Integrity & a sense of responsibility characterize our actions

Optimize the existing

70 %

Agriculture

- Increase of marketing in USA ex Bethune
- Increase of trading business in Middle East, China and India
- Improved leveraging of local sales network

Industry+

- Focus on potash product groups for industrial product sales
- Capacity expansion of high-purity salts
- Optimization of de-icing salt setup

Supply Chain

- Warehouse and network optimization for European salt logistics
- Optimization of warehousing
- Improved use of infrastructure

Werra 2060 – Securing a sustainable future

70 %

How do we want to achieve this?

Innovations in extraction and production

- Unterbreizbach and Wintershall sites: Focus on wastewater-free processing methods
- Unterbreizbach mine: Expansion of secondary mining operations (drill and blast)
- Hattorf-Wintershall mine: Introduction of secondary mining (drill and blast)
- Unterbreizbach and Hattorf-Wintershall mines: Dry backfill utilization
- Hattorf plant: Continued operation unchanged for the time being

Methods already tested or in use on other sites!

Future-oriented product portfolio

- Lower energy consumption, reduction in CO₂ emissions and modified product portfolio through conversion of the processing and refining processes in Wintershall and Unterbreizbach
- Further development of specialties portfolio with unchanged production volumes
- The products become more competitive under cost, sustainability, and quality criteria

Reduction in environmental impact

Reduction solid residues:
by 8 to 7 million t eff. p.a.
▶ avoiding tailings pile expansion
Wintershall beginning of the 2030s

**Halving CO₂ emissions
at the Unterbreizbach and
Wintershall plant**

Reduced steam requirement: Higher flexibility regarding the energy source

**Saline process
waters reduced:**
by more than
1.0 million m³ p.a.

Bethune – Efficient Production in Canada

70 %

Primary & Secondary Mining – Ramp-up of the production from a good 2 to 4 mln. tonnes p.a.

In **primary mining**, fresh water is pumped into the layer containing potash, creating so-called caverns.

The water pumped into the cavern dissolves the potassium salt and a water-salt solution (brine) is formed.

The resulting brine is pumped upwards with pressure.

The brine is then evaporated in a factory and processed further.

In secondary mining, only saturated NaCl brine is injected instead of fresh water.

The remaining KCl reserves are selectively dissolved from the existing caverns.

The resulting brine is pumped upwards with pressure.

The KCl crystallizes on the surface due to the outside temperature in a cooling pond.

Secondary Mining: Cost-effective, water- and energy-saving method!

Bethune – Above ground

In the middle of Saskatchewan

Bethune – Below ground

Pads and caverns

12 x

➡ In Bethune, a pad currently includes 12 underground caverns. Each one of them is about the size of a Bundesliga stadium.

Ambitious climate strategy adopted

*With the already expected adjustments to the base value 2020

Note: CO₂ emissions refer to CO₂ equivalents.

- **Since 1990 we have already reduced our CO₂-emissions significantly:**
 - We achieved this through the extensive use of highly efficient combined heat and power (CHP) technology, comprehensive energy efficiency measures and capacity reductions.
- As part of Climate Strategy 2.0, we have set additional ambitious medium- and long-term targets:
 - **We aim to reduce our CO₂-emissions by 25% by 2030 and by 60% by 2040 compared with the 2020 baseline. From 2045 onward, we aim to achieve greenhouse-gas neutrality.**
(refers to Scope 1 and 2 emissions of our production sites)

Decarbonization – Greenhouse Gas Neutrality *

Targets

By 2030:

Reduction of absolute CO₂ emissions* by at least

25%

By 2040:

Reduction of absolute CO₂ emissions* by at least

60%

By 2045:

We strive for greenhouse gas neutrality*.

100%

Implementation

Focusing on the following key areas to reduce CO₂ emissions:

Examples of specific measures:

Construction of a biomass combustion plant and a CHP plant to reduce emissions by more than 100 kt CO₂ p.a. by 2026.

Renewable energy for products with the smallest possible CO₂-footprint.

Expectation

Conditions in the energy industry framework that provide incentives for **decarbonization**. This also includes a sufficient and resilient energy infrastructure, financial support and affordable renewable energies.

We support the goals of the Paris Climate Agreement.

* Scope 1 + Scope 2 of our production sites compared to the base year 2020

Note: CO₂ emissions refer to CO₂ equivalents.

Scope 3 emissions according to categories

- K+S is very early in the value chain. The evaluation of the full scope 3 emissions, therefore, is a difficult process.
- With the first annual report according to ESRS, we re-evaluated our scope 3 emissions. All data was reviewed and changes in methods/ranges lead to deviations from the previous figure.
- For the current report, several categories have been identified as material. Among these, processing of sold products accounts for the largest share, representing almost 40% of emissions.
- Others* (waste generated in operations, business travelling, employee commuting, upstream leased assets, downstream transportation, processing of sold products as well as investments) are also reported but these represent only approximately 15% of the total emissions.

- K+S has different impact on the different categories. The main influence is on:
 - **Upstream transportation and distribution:** The choice of means of transportation can influence the value. Our goal is to further reduce the GHG emissions associated with this category. **By 2030, K+S aims to reduce its KPI for specific greenhouse-gas emissions in logistics by 10% compared with 2017, this target has already been achieved.**
 - **Fuel and energy-related activities:** The choice of energy source can influence the value. The reduction of this category is reflected in our ambitious climate strategy.
 - **Capital goods and Purchased goods and services:** The choice of these types of goods can influence the value.

Note: CO₂ emissions refer to CO₂ equivalents.

Our future – The **climate-friendly** potash production

In future, we want to produce potash with the smallest possible CO₂ footprint – compared to today and compared to our foreign competitors.

To do this, we are treading two paths in parallel:

The **change in production and processing processes** – from wet to dry processing

The **change in energy use** – from fossil fuels to renewable energies

With the "Werra 2060" project, we are taking the first major step in **changing our production processes**. To do this, we need to extract and process the crude salt from the reservoir in a way that is as climate-neutral as possible. This transformation project is the only one of its kind in potash mining in the world. In Zielitz, we have launched a pilot project for the use of power-to-heat, thereby pushing a **change in energy use** ahead. In the meantime, we have already installed power-to-heat systems at three sites.

The de-carbonization of the entire German potash production requires **state support**: in the provision of infrastructure and green energy sources, in the development of legal frameworks, in procedures (planning acceleration) and in the **provision of subsidies**.

CO₂ reduced potash for sustainable agriculture

Development of footprint of potash (MOP)

The reduction in emissions results from the conversion of consumption from fossil to renewable energy.

The remaining emissions are distributed across sub-processes that (so far) cannot be converted.

Aggregated CO₂-footprint MOP K+S

Potash with the smallest possible CO₂ footprint due to the use of renewable energy

Requirements for the change of technology

In future, we will be able to produce potash in Germany with the smallest possible CO₂ footprint. Both ways of achieving this – changing the production and processing methods as well as changing the use of energy – require **high investments**.

The potash industry needs a **supportive regulatory framework** for this:

High availability of renewable energy to enable potash production with the smallest possible CO₂ -footprint

Expansion of renewable-energy capacity and targeted grid connections to meet the increased electricity demand

Offsetting additional expenditure incurred by using green electricity through government funding

Note: CO₂ emissions refer to CO₂ equivalents.

Salt with the smallest possible CO₂ footprint by 2030

Current system

The challenge is to identify the right technologies for each site and establish them within the next 20 years. The opportunity lies in the intelligent connection of systems and operation modes in the markets.

System conversion from 2030

➔ Conversion of the salt works to low CO₂ operation and the plants to "green" electricity procurement (CO₂-neutral)

Braunschweig-Lüneburg

- Already very low in CO₂ as heat is generated in a biogas plant

Frisia

- Waste incineration currently CO₂-free

Borth

- Construction of biomass heating plant

Grow the core

20 %

We enable farmers to achieve greater economic success

Expansion of the portfolio

- Fertilization
- Fertigation
- Micronutrients
- Concepts for soil health
- Further additions to the portfolio

Logistic access

- Circular economy
- Last Mile Distribution

Digital sales

- Agronomic services
- Digital sales channels (e.g., web shops)
- New digital business models
- Direct access to the farmer

New business areas

10 %

Subsequent use of existing assets and development of new business areas

Renewable energy and decarbonization

- Increasing **use of renewable energies** (wind, sun, biomass) at our sites
- **Use of available space** at our sites for RE
- Conversion of production (**increase in energy efficiency**) and use of green hydrogen if necessary
- Energy trading

Circular economy

- Circular economy is driven by various political and social factors
- First and foremost is the efficient use of our own natural raw materials
- The aim is **to process residues or by-products for reintroduction** into the raw material cycle

Disposal / waste management

- **Underground disposal / recycling**
- Underground interim storage
- Underground **urban mining**: retrieval of waste containing raw materials

Lived transformation / subsequent use of infrastructure

- Re-dedication and continued use of large-scale production facilities above ground / mines
- Development of new business models (underground farming)
- Use of existing expertise / resources to open up adjacent business areas

Performance Indicators

Key Financial Performance Indicators

The Company's activities are managed based on the following key financial performance indicators, which are the most important financial performance indicators within the meaning of the German Accounting Standards (DRS) 20:

- EBITDA
- Group earnings after tax, adjusted
- Capital expenditure
- Adjusted free cash flow
- Return on capital employed (ROCE)
- Net financial liabilities (incl. financial lease liabilities)/ EBITDA
- Net debt/EBITDA

Non-financial Performance Indicators

Performance indicators and target values in sustainability management were defined for the K+S Group in 2018. We , therefore, also managed the Company using the non-financial indicators stated below. These form the basis for part of the long-term incentive (LTI) as a variable component of the Board of Executive Directors' as well as all LTI-entitled employees' remuneration. They are the key non-financial performance indicators within the meaning of the German Accounting Standard (DRS) 20.

- Lost Time Incident Rate (LTI rate¹)
- Reduction in specific CO₂ emissions

Other financial and non-financial performance indicators that are relevant for the K+S Group include revenues, sales volumes, average selling prices, and number of employees. However, these figures are not considered financial or non-financial key performance indicators within the meaning of German Accounting Standards (DRS) 20.

¹ The so-called LTI rate measures occupational incidents with lost time in relation to one million hours worked.

Performance Indicators

Key Financial Performance Indicators		2020	2021	2022	2023	2024	2025
EBITDA	€ million	444.8	1,067.3	2,422.9	712.4	557.7	612.8
Group earnings after tax, adjusted	€ million	-1,802.5	2,182.4	1,494.0	161.9	3.6	125.5
Capital expenditure	€ million	526.0	334.3	403.8	525.3	530.8	545.8
Adjusted free cash flow	€ million	-42.2	92.7	932.0	311.2	62.4	29.1
Return on Capital Employed (ROCE)	%	-22.8	42.9	25.7	3.2	0.0	1.9
Net financial liabilities (including lease liabilities)/EBITDA _(LTM)	x-times	7.8	0.7	- 1	- 1	0.4	0.4
Net debt/EBITDA _(LTM)	x-times	10.5	1.7	0.3	1.7	2.6	2.6 ²

¹ In the years 2022 to 2024, there were net financial assets.

² Net debt also includes long-term provisions for mining obligations with maturities of more than 10 years in the amount of € 1,061.7 million. Excluding these obligations from net debt, the ratio is 0.9.

Non-Financial Performance Indicators		2020	2021	2022	2023	2024	2025
Lost Time Incident Rate	LTI rate	8.8	11.3	8.3	7.6	5.4	5.5

6 | 9 Customer Segment Industry+

Industry+ customer segment at a glance

Characteristics

- **Industrial:** Diverse applications in a wide range of industries – from industrial processes and water treatment to animal feed and food processing. Flexibility, a broad product range and customer proximity are our top priorities.
- **Chemical:** Focus on chlor-alkali electrolysis, where maximum purity and reliability are crucial. Our products support key processes in the chemical industry.
- **Pharmaceutical:** High quality standards for certified and innovative applications as a reliable partner.
- **Consumer:** Strong brands for use in the household and leisure sector – especially table salt, water softeners, pool salts and de-icing salts.
- **Communities:** Public road construction authorities, winter service providers and large commercial consumers purchase de-icing salt from K+S mainly through public tenders.

Industry+ | Products and main areas of application

Industry: **40%**

Other activities make up approx. **17%** of the Industry+ customer segment. **As of 2025 Annual Report.**

Industry+ | Value creator #1 | Chemicals

Customer group: Chlor-alkali and the cellulose industry

1.5 million tonnes annual volume in 2025

Products:

- Sodium and potassium chloride as essential raw materials for chlor-alkali electrolysis
- Magnesium sulphate as an additive in the cellulose industry
- Natural products of consistently high and good quality
- C-LIGHT: Our contribution to the CO₂-reduced industry
- Product certificates in accordance with international standards and norms

Services:

- A strong focus on reliability and delivery performance
- Professional expertise in technical customer application advice

Supply regions: Global sales market with a focus on Europe

Industry+ | Value creator #2 | Food processing

Customer group: Food and beverage industry and carrageenan producers

600,000 tonnes annual volume in 2025

Products:

- Diverse product portfolio of rock, vacuum & sea salt, potassium chloride, sodium-reduced Balance Salt and magnesium sulphate with the NUTRIKS brand
- Premium quality standards, assured by accredited certifications
- Natural origin, highly pure & certified according to international standards
- Various grain sizes

Services:

- Short transportation routes due to naturally deposits in Europe
- Different packaging formats
- Individual customer service through local sales units spreads across the globe and technical customer application advice

Supply regions: Salt portfolio: Focus market Europe
Potassium-magnesium portfolio: Global sales market

Industry+ | Value creator #3 | Industr. Applications

Diverse industries, e.g. electroplating, mineral oil, gas, textile, glass, building & plastics industries

400,000 tonnes annual volume in 2025

Products:

- Potassium, sodium and magnesium chloride as well as potassium and magnesium sulphate as raw materials and additives for industry
- Purity, grain sizes and hydrate levels customized to the customer's specific areas of application
- Natural origin & certified according to international standards

Services:

- Individual delivery quantities in 25 kg bags, big bags or bulk
- Natural deposits in Europe and North America guarantee short transportation routes
- Customer service through local sales units and technical customer application advice

Supply regions: Salt portfolio: Focus market Europe

Potassium-magnesium portfolio: Global sales market

Industry+ business – a stabilizing anchor

Industry+ revenues remain stable despite market fluctuations (excluding de-icing salt)

Revenues in €t

Stable Industry+ business:

Industry+ shows consistently stable revenue development despite market fluctuations.

Low volatility: Significantly less price-sensitive than the Agriculture customer segment.

Reliable earnings driver: Industry+ acts as a constant stabilizing anchor for K+S's overall revenues.

The image shows an industrial facility under a clear blue sky. On the left, a large grey building has the word "QEMETICA" in green 3D letters. To the right of the building are three tall industrial chimneys with red and white horizontal stripes. The central chimney is the tallest and has a complex metal scaffolding structure around its middle. In the top right corner, there is a blue diagonal banner with the white text "K+S".

K+S

7 | 9 Acquisition of Qemetica's salt business

Reducing volatility by allocating capital to initiatives with advantageous market conditions

Strategy

Delivered major strategic milestones through portfolio repositioning, restoring a strong balance sheet, and an organizational transformation

Strategy

- 1 Strengthen existing core business
- 2 Expand and develop core business
- 3 Establish new business areas

» Continuing to strengthen competitiveness to ensure long-term resilience and market positioning

» Advancing efficiency gains while upholding rigorous cost discipline across the organization

Initiatives

Agriculture

- Disciplined potash business optimization with Bethune ramp-up (100–150 kt p.a. to 4.0 Mt) at maximum speed in current setup
- Project Werra 2060

Industry+

- Salt market gaining strong momentum, supported by supply-side improvements
- **Strengthening existing business:** expanding the specialty portfolio in line with market opportunities to reduce cyclicity and enhance competitiveness

QEMETICA salt business acquisition

K+S capitalizes on market opportunities to reinforce its competitive position

K+S salt business has demonstrated impressive recent momentum

Salt has transitioned from a stabilizing element to an increasingly important value driver

- Supply-side shifts have durably reinforced the strength and performance of the salt business in recent years
- The fundamentally enhanced business model is most evident in sustainably stronger earnings performance
- Volatility, capital requirements, and capital intensity are significantly lower than in the potash segment
- Salt has evolved from a stabilizer into a true value driver

K+S acquires Qemetica's salt business

Acquiring Qemetica Salt unlocks a strong growth opportunity for our European salt business

Qemetica

- Qemetica, founded in 1945 and headquartered in Warsaw, Poland is a **European chemical group** active in soda, salt, silicates, and agrochemicals
- The company is 100% privately owned by Kulczyk Investments

Nature of transaction

- **Acquisition (100%) of Qemetica's salt business unit**
- Structure: share deal, **100% cash consideration**
- Expected closing: **Q1/2027**

Transaction value

- **€350 million upfront payment**
- €30 million earn-out linked to business performance 2026 & 2027

Closing conditions

- Receipt of required regulatory approvals, e.g. antitrust approval
- Other customary closing conditions

Qemetica Salt at a glance

Qemetica's specialty salt portfolio aligns seamlessly with our salt business, generating attractive synergies

Strong European high purity salt supplier
Perimeter includes two plants

Janikowo: one of the largest evaporated salt plants in EU

Stassfurt: most modern salt plant in EU, launched in 2021

Excellent cost-efficiency positioning

- Backed by advantaged locations, loyal customers, and a trusted brand

Specialty end-markets

- Focused on water treatment, food & consumer products with minimal commodity exposure

Growth focused

- Strong internal initiatives driving energy efficiency

Sales breakdown

Geographical

End markets

~€125m
Revenues 2025

A major
evaporated salt
producer

2025

~400
Employees

~1,000kt
Capacity

Extends geographic and product portfolio in industry and consumer segments and adds capacity

Expand Industry and Consumer segment

Geographical footprint incl. Qemetica Salt

Rationale: Capacity expansion and diversification

Acquisition enhances salt footprint, diversifies the business, reduces cyclicity, and strengthens cash-flow stability of K+S Group

Value creation anchored in performance upside and synergy realization

Acquisition multiple, synergies included, is lower than K+S's trading multiple

Pro-rata earn-out based on success in 2026&'27:

- Volume ramp with strategic customers sustainably evaluated
- Detached from de-icing salt business

Synergy levers:

- **Revenue synergies:**
 - Portfolio synergies
 - Efficiency gains in logistics and network
- **Cost synergies:**
 - Organizational scaling effects
 - Procurement and OPEX optimization

2025 implied PP/EBITDA multiple incl. sustainable earn-out and synergies at below 6x

Financing implications of proposed transaction

K+S is reviewing various financing and capital market instruments to fund the purchase price for the acquisition and to optimize the Group's financing structure. If no financing has been completed by the closing date, K+S can draw on existing liquidity and firmly committed credit lines, and, if necessary, refinance at a later point in time.

Pro-forma net financial leverage of approximately **0.4x net financial liabilities/ EBITDA** at closing; no meaningful impact on leverage (net debt / EBITDA)

Immediate positive earnings contribution after closing

Commitment to **current dividend policy**

Goal to maintaining current **investment grade credit rating**

Summary

K+S: Combining potash and magnesium products with salt strengthens sustainable value creation

8 | 9 K+S Value creation, production and management of residues

Phases of our value chain

Exploration		Our potash and salt deposits came into being millions of years ago. They are either our property or we have corresponding rights or approvals that allow the extraction or solution mining of the raw material reserves.
Mining		We extract raw materials in conventional mining below ground as well as through solution mining. We also use the power of the sun and extract salt by evaporating sea water or saline water.
Production		The refining of raw materials is one of our core competencies. Above ground, the crude salt is processed in complex, multi-phase, mechanical, or physical processes, with the natural properties of the mineral remaining unchanged.
Logistics		The long-term securing of freight capacity is of strategic importance to us. A large part of our international transportation volume is forwarded by service providers with which we maintain long-standing partnerships.
Sales/ Marketing		The K+S Group wants to be the preferred partner of its customers in the market. High product quality and reliability are crucial prerequisites for this. K+S offers a comprehensive range of services for agriculture, industry, and private consumers.
Application		Our customers apply our products, use our raw materials in their processes or process them in their products. We make extensive product information available and advise our customers on the application of our products.

Underground mining production cycle

Conventional mining

Main production methods for salt

Rock salt

Conventional
mining

Sea/solar salt

Crystallization
of sea water

Evaporated salt

Recrystallization
of purified brine

Brine

Controlled
solution mining

- Around 60% of worldwide salt production (more than 290 million tonnes including brine) is obtained from rock salt mining and solution mining.
- Approximately 40% of production is obtained from seawater and salt lakes.¹

Salt is produced in almost every country in the world. Due to the high share of transportation costs in production costs, markets are generally regionally limited to the area around the production sites.

K+S in Canada: Bethune

Strengthening our global presence

- Expanding our current production portfolio in Germany with a North American production site
→ **Only supplier with production sites in Europe and North America**
- Securing a **good asset base** with **competitive production costs**
- Sales and distribution through **existing distribution structures** of the K+S Group
- **Regional growth projects** in China and Southeast Asia
- **Flexible multi-product strategy**

K+S logistics at a glance

We deliver our products to the customer: CO₂-efficient, cost-effective, fast and flexible!

Fast and flexible

Thanks to multimodal means of transportation and high rail capacities, we can **deliver quickly and directly to our customers.**

Cost-efficient

Through careful planning and efficient use of resources, we offer a logistics solution that is **competitive and cost-effective.**

Quality-conscious

A high proportion of **direct transports** and the proximity to our sales markets are **particularly beneficial to the quality of our products.**

Low CO₂ transportation

We rely on **environmentally friendly means of transport** and **optimized routes** to minimize CO₂ emissions and make our contribution to climate protection.

Cost curve at customer's gate much flatter

Ramp-up of Bethune as well as measures to optimize the existing business

Not accounting for carrier insurance premiums out of Russia/Belarus;
Line length = Production capacity in million tonnes

➔ Increasing improvement in cash costs and competitive position

Potash processing above ground

Thermal dissolution

Flotation

Electrostatic Separation (ESTA®)

Potash production: management of residues

- Crude salt has only a limited recyclable content (max. 30%), therefore the generation of residues is inevitable. All potash producers worldwide face this challenge.
- The recycling of partial volumes is performed at all producers.
- The methods, processes, and equipment for the construction of tailings piles from solid residues are **scientifically justified, tried and tested in practice**. These ways of disposal – depending on the corresponding site – are used also in combination. They currently represent the **best available technique**. Solid or liquid residues are disposed of worldwide in the following ways:

Ø Share** of residue disposed by this method in the Hessian-Thuringian potash district in 2022:

~84%

~7.5%

~5%

~3.5%

* With low river water levels in the Werra, there are possibilities for K+S in the Hessian-Thuringian potash district to temporarily store liquid residues in water basins or suitable mine spaces on site or temporary ways of disposal by flooding decommissioned mines or gas caverns in Lower Saxony or Saxony-Anhalt.

** Percentage by mass of salt

Green investments = long-term planning security

Tailings piles extensions

Hattorf

Wintershall

Zielitz

- Approval of Hattorf tailings pile expansion (phase 3) in mid-2025 and investments required
- Next approval and significant investments in tailings pile extensions will not be necessary again until the end of the 2020s

Liquid residues

Werra

- Deep-well injection ended 2021
- From 2028: Positive effects of the Werra 2060 projects

Reduction of tailings pile water: coverage & greening

Our objectives

- From 2030 onwards, K+S will be able to use three million tonnes of residue annually for purposes other than tailings pile disposals.
- By 2030, we want to cover a further 155 hectares of tailings pile area and thus further reduce or avoid the accumulation of tailings pile water.

The procedure

Soil and construction rubble are installed in several layers on the stockpile in a precisely defined process.

→ Formation of a cover, the upper layer of which is permanently greened.

Objective

Reduction of tailings pile water by up to 90%

Tailings pile and process water at the Werra site

Development of saline wastewater

Reduction of saline wastewater based on various measures within the last 25 years:

- Underground disposal in Unterbreizbach
- Optimization of production and manufacturing processes
- ESTA - facility, cold preliminary decomposition and high consistency facility, kainite crystallization and MgCl_2 facility
- Establishment of a kainite crystallization and flotation facility; advantage: additional product

Additional ways of disposing saline wastewater

- **On-site:** Temporary storage possibility of up to 1.0 million m^3 (basins and temporary storage underground).
- **Off-site:** Flooding of decommissioned mines or caverns for their restoration.
- As part of our strategy and the optimization of our existing business, the focus at the Werra site will be on reducing solid and liquid residues as well as energy consumption and therefore CO_2 emissions.

Disposal of saline wastewater

Remote flooding of abandoned mines or caverns and temporary storage underground as of 2028: higher positive effects of the Werra 2060 project

Discharge Werra ² in compliance with the target values of the FGG Weser

¹ Including NeuhoF

² Further reduction and avoidance of tailing pile water targeted by covering tailings piles; continuing R&D developments with external partners, among others

The Company may not notify you of changes and disclaims any obligation to update or revise any statements, in particular forward-looking statements, to reflect future events or developments, save for the making of such disclosures as are required by the provisions of statute. Thus statements contained in this Presentation should not be unduly relied upon and past events or performance should not be taken as a guarantee or indication of future events or performance.

This Presentation has been prepared for information purposes only. It does not constitute an offer, an invitation or a recommendation to purchase or sell securities issued by K+S Aktiengesellschaft or any company of the K+S Group in any jurisdiction.
